

## Instructions: How you put it together

Thread the chain through the ring

or feed the end of the chain directly onto the bracket

**Warning:**  
Please only use a chain that will withstand the weight of an iPod nano 6G

Slide the bracket and the ring back into the body. If you don't need the ring put it back in the ring garage then it won't get lost.

**7** Now you can close the iPod clip again and push the kit to the bracket until its tip slots into place with a click

When removing the digems kit, push the tip lightly away from the ipod and the kit will slide away easily. As soon as the underneath of the body is visible the iPod clip can be pressed and the kit removed sideways.

**6** Make sure when sliding it in that the shaded area points outwards

## Gem it up!

### Download free the designs you love

Download the designs of your choice for free via the Upload/Download Area of digems.com. **Have fun checking them out.**

Set up a folder on your computer that you call, say "digems". Within that folder create another one (e.g. "gem\_01") and save your downloaded image here. If you only save one image in the folder your iPod nano 6G will only show one image in the slideshow. With more images they alternate. Set up more than one "gem" folder and you'll be able to switch between slideshows easily.

### Upload Images to your iPod nano 6G

Connect your iPod nano 6G to iTunes and select it there under "equipment". Change the view to "photo". Select your "digems" folder and click "synchronise". After disconnecting from your computer you can choose "gems" under "photos".

### Set up

**1.** Choose "settings" from the menu items on your iPod nano 6G. Under the menu item "general" you can adjust the brightness of your display - in other words how bright you wish the motif to be displayed.

**Tip:** even a low brightness setting still allows your motif to really shine.

**Warning:** The brighter the setting the shorter the battery life.

**2.** Select "photos" from the menu item settings. Here you can set the length per slide as well as the transitions.

**Tip:** If you only wish to wear one design permanently without visible transitioning choose "Dissolve" under transition.

**3.** Choose your album (folder) e.g. "gem\_01" from "photos" in the main menu. Choose the preferred motif and click on it again: The start button will appear. Click "play" and your motif will appear without interruption for up to three hours (depending on selected brightness and battery life).

If you don't start a slideshow, your iPod will automatically switch to standby mode after a while. This saves energy. Pressing on the "home" button will cause the motif to reappear immediately.
